

## Media Advisory

The Madison-Gallatin chapter of Trout Unlimited, along with Montana State University Fly Fishing Club will host a screening of the award-winning documentary film, “Red Gold,” on Wednesday, March 23. The one-hour film highlights the beauty and productivity of the Bristol Bay, Alaska watershed, its rich salmon runs and the fishermen, Alaska Natives and others who make their living from this amazing fishery. “Red Gold” also explores the dangers to the waters and wildlife habitat of the Bristol Bay region from the proposed Pebble Mine.

**When:** Wednesday, March 23, 7 p.m.

**Where:** Emerson Theater, 111 South Grand Avenue, Bozeman

**Details:** \$5 admission; commercial fisherman Curt “Ole” Olson, and fly fishers Dave Egdorf and Camille Egdorf – who are all featured in the film – will speak before and after the screening

**Contact:** For more information, please call or e-mail Mark Peterson at (406) 595-1409 or [mark@dahlcares.com](mailto:mark@dahlcares.com)

### **Bristol Bay is:**

- A 40,000-square mile wetland (that’s about the size of Kentucky) with nine major rivers
- Home of the world’s largest sockeye salmon run
- Host to one of North America’s largest king salmon populations
- The center of a \$450 million a year fishing industry
- One of the last untouched areas on the planet

### **Pebble Mine would:**

- Create an open-pit mine up to two miles wide and 1,700 feet deep
- Dig an underground mine of a similar scale
- Dump up to 10 billion tons of perpetually toxic mine waste in the heart of the Bristol Bay watershed
- Be operated by and profit two foreign companies with a poor environmental record
- Potentially destroy salmon runs, other fishes, habitat, wildlife and the overall beauty of this productive and wild area
